## Under Treasurer's Certification

In accordance with the provisions of the *Fiscal Integrity and Transparency Act*, I certify that the financial projections included in the 2009-10 Mid-Year Report are based on Government decisions that I was aware of, or that were made available to me by the Treasurer, before 18 November 2009. The projections are presented in accordance with the Uniform Presentation Framework.

Jennifer Prince  
Under Treasurer

19 November 2009

## Chapter 1 Overview

The 2009-10 Mid-Year Report has been prepared in accordance with the *Fiscal Integrity and Transparency Act* which requires the Treasurer to prepare and publicly release a mid-year fiscal outlook report each year. The Under Treasurer certifies the accuracy, completeness and reliability of all financial projections and associated information, as required by the Act.

The updated budget projections and economic outlook incorporate both the 2008-09 outcome as presented in the 2008-09 Treasurer's Annual Financial Report (TAFR) and the continued effects of global economic and financial conditions that were outlined in the May 2009 Budget.

The Commonwealth's recently released Mid-Year Economic and Fiscal Outlook presents a slightly improved position for the Australian economy from that projected in May 2009. This improvement flowed to the Territory in the form of GST revenue. This coupled with an increase in Territory own-source revenue shows a strengthening in the Territory's financial position.

The 2009-10 update is also influenced by the 2008-09 outcome, which was a considerable improvement on the May 2009 estimate, due largely to additional tied Commonwealth funding received in June 2009. The improved position in 2008-09 results in consequential additional expenditure requirements in 2009-10. However, this carryover of expenditure into 2009-10 is significantly offset by additional revenue as a result of improving economic conditions nationally and in the Territory. Although there is a small increase in the estimated deficit in 2009-10 due to these timing issues, the underlying financial position for 2009-10 shows a significant improvement. The cash targets for 2010-11 and forward years remain unchanged.

The fiscal highlights in the Mid-Year Report include:

- operating surplus is improved over the forward estimates providing additional capacity to invest in infrastructure;
- the cash deficit has increased to \$249 million in 2009-10 due to timing of Commonwealth funded expenditure. When these timing issues are removed, the underlying financial position is an improvement of \$100 million in 2009-10;
- cash outcome and accrual fiscal balance projected to remain in deficit over the economic cycle but still trending to improvement; and
- ratios of net debt and net financial liabilities to revenue improved since the 2009-10 Budget as a result of the improved 2008-09 outcome, and improved economic conditions, resulting in increased revenue, higher value of the Territory's investments and lower superannuation liability.

From an economic perspective the global economy is recovering more quickly from the global financial crisis than was anticipated at the time of the Budget, driven by a rebound in Asian (especially China's) economies. The stronger than forecast recovery in China has been fuelled by expansionary monetary policy and a 4 trillion yuan stimulus package primarily focused on major infrastructure projects across the country.

The Territory economy is expected to be a major beneficiary of the Chinese stimulus package through increased demand for mineral and energy commodities which should support increasing production at a number of mines in the Territory and increase exports.

Upward revisions to growth in exports are the primary reason for the increased forecast of gross state product for 2009-10 of 2.6 per cent from 2.0 per cent in the May 2009 Budget.

The outlook for state final demand has been revised to 3.9 per cent compared with 5 per cent at the time of the Budget due to an upward revision to engineering construction activity in the year due to the result of major project timelines being extended and higher than expected project expenditure.

The Territory's labour market is also expected to be more resilient than originally forecast with the employment growth revised upwards to 2.8 per cent compared with the Budget estimate of 1.5 per cent. This reflects increased activity in the mining sector, coupled with the Territory Government's record capital works expenditure and forecast strong growth in public and private housing construction across the Territory.

At the time of the 2009-10 Budget, the Territory's resident population was forecast to increase by 1.8 per cent to December 2009. This has been revised upwards to 2.0 per cent based on stronger than anticipated growth of overseas and interstate migrants driven by strong growth in private sector housing construction, increased public housing infrastructure in urban and remote areas, Commonwealth economic stimulus spending particularly on schools and the Territory's record capital works program.

The Mid-Year Report revises forecast growth in the Darwin Consumer Price Index in 2009 from 2.6 per cent to 2.8 per cent based on stronger growth in housing and rental prices in the year than originally forecast.

Changes to revenue from the Commonwealth and Territory own-source revenue since the May 2009 Budget and associated expenditure decisions, are provided in Chapter 2, with the revised financial statements presented in Chapter 4. Chapter 3 includes a discussion on the updated economic estimates and the fiscal strategy outlook for 2009-10 and the forward years.

## Chapter 2 Fiscal Position and Outlook

This chapter presents the updated fiscal projections for 2009-10 through 2012-13, compared with the estimates provided in the May 2009 Budget.

It also provides updated information on the Statement of Risks, as required by the *Fiscal Integrity and Transparency Act*.

**Fiscal Outlook** The 2009-10 Budget and forward estimates have been updated to reflect:

- the outcome for the 2008-09 financial year;
- Cabinet decisions since the 2009-10 Budget;
- revised Territory revenue estimates including updated GST revenue; and
- a range of other revenue-related adjustments, largely due to changes in national partnership agreements (NPs) from the Commonwealth.

The wage and price parameters are consistent with those used in the 2009-10 Budget. In line with usual practice, these will be reviewed in the development of the 2010-11 Budget.

**Budget Targets** Table 2.1 presents the key fiscal aggregates for the general government sector for the 2009-10 Budget and the 2009-10 Mid-Year Report.

During the preparation of the 2009-10 Budget, Territory Housing merged with the Department of Local Government and Housing, with the exception of home lending activities, which were included in the government business division, NT Home Ownership. At the time of the 2009-10 Budget, NT Home Ownership was reported in the Public Non Financial Corporation Sector. However, the most recent advice received from the Australian Bureau of Statistics is that NT Home Ownership should be included within the General Government Sector. Accordingly all original budget data presented in this Report has been restated for this treatment change. The effect on budget estimates outcomes is not material.

Source: Northern Territory Treasury

Table 2.1 highlights the forward estimates are generally consistent with those predicted in May 2009. The change in the cash outcome is more pronounced in 2009-10 as it now incorporates the carryover of \$150 million in expenditure obligations from 2008-09 as highlighted in the 2008-09 Treasurer's Annual Financial Report (TAFR). For 2009-10 the cash deficit outcome has increased by \$53 million. The carryover from 2008-09 of \$150 million has been substantially offset by an increase of \$98 million in Territory revenue comprising GST revenue, mining royalties and, to a lesser extent, stamp duty on conveyances and demonstrates the growing strength in the Territory and national economies. Overall for 2009-10, when taking into account the 2008-09 outcome, this represents an underlying improvement of around \$100 million. The projected cash outcomes for the forward estimates period remains unchanged, but includes additional receipts being matched by corresponding payments, largely the result of additional tied Commonwealth funding and a small increase in capacity.

Although the cash deficit in 2009-10 has worsened as a result of timing issues, the net operating balance surplus has improved as some of the carryover expenditure from 2008-09 is for capital purposes. Although this also applies to 2010-11 and 2011-12, it is not the case in 2012-13 as agreements relating to some Commonwealth funding in that year have not yet been finalised.

Operating and Cash  
Flow Statements  
– General  
Government

In line with the estimated cash outcome, the fiscal balance shows a similar increase in deficit for the 2009-10 year with slightly increased deficits over the forward estimates.

Net debt over the forward years is expected to decrease from that projected at Budget-time to \$1248 million by 2012-13, a reduction of \$178 million. This is mainly due to the flow on effect of the improved 2008-09 outcome, a projected increase in revenues and a higher market value of the Territory's investments.

Net financial liabilities are also expected to decrease compared with that recorded in May 2009, largely as a result of the decreased net debt position and the effect of a higher bond rate used to value the Territory's superannuation liabilities. By 2012-13 net financial liabilities are expected to be \$4580 million, a decrease of \$486 million from that published at Budget-time.

Table 2.2 summarises the key movements in the 2009-10 general government cash flow and operating statements since the 2009-10 Budget. Variations are categorised into policy and non-policy variations. Policy variations are the result of Government decisions to implement or expand agency programs. Non policy variations are either due to influences outside the Government's control, such as the timing of receipts from the Commonwealth, or changes in economic parameters.

Source: Northern Territory Treasury

Since May 2009, significant increases have occurred in expenses/payments, partially offset by increases in revenue/receipts. This has resulted in a reduction in both the accrual and cash outcomes compared to May 2009.

General government operating revenue and receipts have increased by \$228.4 million and \$237.3 million respectively.

The revenue-related policy variation is a decrease in taxation revenue of \$2.1 million due to changes in bookmakers tax from 2010 to introduce a capped profit-based tax replacing the turnover based tax.

The main non-policy related variations to revenue since the May 2009 Budget are:

- higher Territory taxation revenue of \$14.6 million, reflecting increased stamp duty receipts on residential and commercial conveyances as a result of higher economic activity;
- GST revenue revised up by \$42.3 million, due to an increase in the Commonwealth's estimates of the national GST pool, as published in the Mid-Year Economic and Fiscal Outlook;
- an increase in tied funding from the Commonwealth of \$130.2 million due to new agreements being finalised or re-negotiated since May 2009, largely related to education, policing and health;
- increased mining royalties revenue of \$41.2 million, associated with increased mining profitability and based on higher collections received year to date; and
- an increase in agency own-source revenue of \$7 million, mainly the result of an increase in hospital cross-border and other patient revenue.

General government expenses increased by \$206.5 million and payments by \$216.9 million due to:

- policy decisions of \$3.9 million approved by Government since the 2009-10 Budget including funding for police beat offices, Fire and Rescue Services and sports;
- the carryover of expense obligations from 2008-09 of \$114.7 million, largely related to timing of the delivery of Commonwealth funded programs; and
- increased expenses of \$84.8 million related to additional tied funding from the Commonwealth with some minor timing differences between years.

In addition to the above operating variations, there have been some changes to capital spending. These are reflected in both the Operating Statement and the Cash Flow Statement, with increases of \$72.8 million in capital expenses and \$73.2 million in capital payments. The key variations are:

- increased tied funding from the Commonwealth of \$38.3 million mainly related to science and language centres under Building the Education Revolution stimulus package and remote police stations; and
- the carryover of capital obligations from 2008-09 of \$36 million, related to receipts from the Commonwealth late in that financial year.

Operating revenue and expenses are projected to fluctuate over the forward years with increases through to 2011-12 before a decline in 2012-13 in line with lower levels of Commonwealth tied funding. This decline is expected to be reversed when further agreements are finalised.

The increases in both revenue and operating expenses since May 2009 are largely matching in all years. Net capital spending has increased by \$73 million in 2009-10 and around \$20 million in 2010-11 and 2011-12 as

a result of a greater proportion of Commonwealth funding being applied to infrastructure in those years.

Overall, the net operating balance remains in surplus in all years. The fiscal balance, which includes the effect of both capital and operating transactions, remains in deficit in all years trending towards a balance, largely in line with that projected in May 2009.

## Operating Revenue

The majority of the Territory's revenue is from the Commonwealth in the form of GST, specific purpose payments (SPPs) and national partnership agreements (NPs) (around 80 per cent).

The level of GST revenue received by each state is dependent on total GST collections, states' population shares and relativities as determined by the Commonwealth Grants Commission (the Commission).

The Territory has adopted the Commonwealth's 2009-10 Mid-Year Economic and Fiscal Outlook estimates for GST revenue to 2012-13 that reflect an increase in expected GST pool growth rates from that predicted by the Commonwealth at Budget-time. This is as a result of the slight recovery in the Australian economy brought on by the significant stimulus measures undertaken by the Commonwealth Government and the Reserve Bank of Australia, a stronger and earlier than expected world recovery (particularly in China), and the resilience of the Australian economy. The effect of this variation is a projected increase in GST revenue to the Territory of \$42.3 million in 2009-10, with a flow on effect to all forward years.

Tied Commonwealth funding in the form of NPs have also been revised upwards since the 2009-10 Budget. These adjustments tend not to affect the fiscal outcome over time as increases in revenue are matched by a

corresponding increase in expenditure, although timing differences may affect the outcome in particular years. The increase in 2009-10 of \$130.2 million is the result of a number of agreements being finalised, predominantly:

- public safety-related increase of \$35.6 million, due to further contributions relating to the Northern Territory Emergency Response;
- education-related increase of \$59.5 million, due to Closing The Gap Teacher Quality, Enhancing Literacy and funding under the Building the Education Revolution stimulus package; and
- health-related increase of \$26 million, due to Indigenous Early Childhood education, Preventative Health, Family Support Package and Royal Darwin Hospital Emergency Department Upgrade.

These were slightly offset by \$20 million, due to Municipal and Essential Services (MUNS) funding being budgeted to be received in 2009-10 but being actually received in 2008-09.

Despite this growth in tied Commonwealth funding in 2009-10, going forward there is an estimated decrease in funding by 2012-13 as a number of agreements are for fixed periods and at this stage their continuation has not been incorporated into projections beyond the life of the existing agreements.

Taxation revenue is the most significant component of the Territory's own-source revenue and is expected to decrease from 2010-11 and forward estimate years from that projected at Budget-time. The majority of this is as a result of the Government's decision to change the basis of the bookmaker turnover tax from 1 January 2010 to a capped profit-based tax. This is offset by a projected increase in stamp duty on residential conveyances and motor vehicle registration collections over the forward estimate years. The upward revision to stamp duty collections is based on higher residential conveyances received to date in 2009-10.

The balance of other Territory own-source revenue largely relates to mining royalties. The estimates for mining royalty collections have been revised upwards for 2009-10 since Budget-time by \$41.2 million on the basis of collections received to date. Projections remain unchanged in all forward years.

## Operating and Net Capital Expenses

Operating expenses are projected to increase in all years compared to the 2009-10 Budget, largely as a result of an increase in expenditure commitments relating to tied Commonwealth funding in 2009-10 and future years, as discussed above.

As highlighted in the 2008-09 TAFR, the significant expenditure increase in 2009-10 relates to the carryover of funding from 2008-09, predominantly relating to the timing of expenditure of tied Commonwealth funding, of which \$114.7 million relates to operational and \$36 million relates to net capital spending.

New programs tied to Commonwealth funding have also contributed to an increase in net capital spending in 2009-10 and outer years, largely due to Closing the Gap for remote police stations and science and language centres under the Building the Education Revolution stimulus package.

## Assets and Liabilities – General Government Sector

Table 2.4: General Government Sector – Balance Sheet – 2009-10 Budget and Mid-Year Report

Table 2.4 presents the key measures for the general government sector balance sheet as presented in the May 2009 Budget Papers and the 2009-10 Mid-Year Report.

	2009-10	2010-11	2011-12	2012-13

Source: Northern Territory Treasury

The estimate of net worth has improved significantly for 2009-10 and over the forward estimates period since the 2009-10 Budget. This is largely due to the flow on effect of the improved balance sheet position, including the upward revision of the Territory's assets (road and bridge assets), as reported in the 2008-09 TAFR.

Net debt is estimated to decrease by \$178 million to \$1248 million in 2012-13 from Budget-time, due to a combination of the flow on effect of the cash surplus achieved in 2008-09 and a projected increase in the Territory's financial asset base, partly offset by an increased cash deficit in 2009-10. Net debt as a percentage to revenue is estimated to be lower than that predicted in May 2009, dropping to 28 per cent by 2012-13.

Financial investments held by the Territory Government comprise a range of instruments including short-term securities, fixed interest securities, fixed rate notes and equities. These financial assets are structured in separate portfolios to ensure that they meet the purpose for which the investments have been designated. The majority of assets are held in short-dated low-risk investments to match the relatively short-dated nature of their requirements.

In the case of the Conditions of Service Reserve (COSR) these investments are managed by three external fund managers and relate to amounts that have been set aside to fund the Territory Government's long-term employee liabilities in future years. Accordingly these investments have a weighting to long-term growth assets in order to match the long-term nature of the liability.

## Statement of Risks

During 2008-09 the COSR experienced an unrealised decline in market value and was valued at \$345 million at 30 June 2009. In line with the recent increase in economic and financial market conditions, the unrealised loss experienced in 2008-09 has largely been reversed and the value of the COSR is \$387.8 million at 31 October 2009. The returns on these investments to 31 October 2009 are 12.32 per cent.

The net financial liabilities measure is expected to reduce to \$4580 million by 2012-13, a \$486 million decrease on that estimated at Budget-time. This is in line with the decrease in net debt and a reduction in the value of the Territory's superannuation liability as a result of a higher discount rate being used to value the liability than anticipated in May 2009.

When measured as a percentage to revenue, it is expected that the net financial liabilities ratio will be lower than that projected in May 2009, dropping to 103 per cent by 2012-13.

The *Fiscal Integrity and Transparency Act* requires that each Fiscal Outlook Report must contain "a statement of risks, quantified as far as practical, that could materially affect the updated financial projections, including any contingent liabilities and any Government negotiations that have yet to be finalised".

The risks identified and explained in detail at the time of the 2009-10 Budget remain appropriate, with the following providing a summary of those risks that have been updated to reflect recent events.

### Revenue

**GST Revenue** – The most significant risk to the Territory's Budget is GST revenue changes. GST revenue accounts for over half the Territory's budget and therefore even small variations in key parameters can have a significant impact on Government's funding capacity and budget outcomes.

The three parameters affecting the amount of GST to be received are: the Territory's relativity; the size of national GST pool; and the Territory's share of the national population. The most significant risks are in the national GST collections and GST relativity components.

The estimates for GST collections for 2009-10 to 2012-13 are higher than those used in the Territory's 2009-10 Budget and are based on the Commonwealth's Mid-Year Economic and Fiscal Outlook forecasts. The increased GST revenue projections reflect the expected slight improvement in the Australian economy. However, a slower and or weaker recovery than that predicted represents a significant downside risk over this period.

GST relativities are generally affected by cyclical economic circumstances, however the 2010 Major Review of State Revenue Sharing Relativities currently being undertaken by the Commonwealth Grants Commission is a significant risk to the Territory's GST revenue. The outcome of the 2010 Review (which will be based on a major methodology revision) will not be known until February 2010. However, the 2010 Review draft report published in July 2009 suggests a significant decrease in the Territory's relativity which, if realised, would result in an ongoing reduction in the Territory's GST revenue of around \$340 million annually. Although the Commission prefaced the draft report by stating that its results may not be indicative of the final outcome, the

risk of a significant decrease in the Territory's relativity resulting from the 2010 Review remains a major concern.

The Territory's population estimates to 2012-13 reflect the expected performance of the Territory's economy based on confirmed projects. There is significant upside risk should the Inpex or other major projects proceed in the short term. The effect of a 1 per cent variation in the Territory's population estimates is estimated at +/- \$22 million in 2009-10 and +/- \$24 million in 2012-13. The cumulative impact would be +/- \$99 million by 2012-13.

**Other Commonwealth Revenue Grants and Subsidies** – SPP agreements have historically posed risks to state budgets in several ways. The recent reforms to Commonwealth-State financial relations arising from the new Intergovernmental Agreement on Federal Financial Relations (the new IGA) have provided greater clarity in relation to tied Commonwealth funding. However, the adequacy of indexation of SPPs remains a key risk. The structure of some NPs (introduced under the new IGA) also poses a risk to the Territory's revenue should the Territory not be deemed by the Commonwealth to have met the necessary milestones for payment.

**Own-Source Revenue** – The amount of revenue received from Territory taxes and royalties is dependent upon the performance of the Territory economy and other external factors. Mining royalty revenue is mainly affected by changes in mining production levels, commodity prices and exchange rate conditions. Mining revenue forecasts rely on advice from mining companies of their expected estimated liability for the financial year and unpredicted market changes in any of these factors will have a material impact on mining royalty revenue. The state of current global financial markets and world economies have continued to result in volatility of commodity prices and exchange rates.

Forecasting conveyance stamp duty is also difficult because it is linked to activity in the property market. Although there had been evidence that growth in residential property market activity had eased, the extent and timing of any drop is difficult to predict, as demonstrated by current strong property markets. In addition, the Territory has a relatively small conveyance duty base which includes valuable commercial properties including pastoral properties and mining projects. These factors introduce significant variability in collections as a result of the impact of the duty collected from large commercial transactions.

### Expenditure

**Parameters** – Increased cost and demand influences on the forward estimates pose a risk in increasing budget pressures.

The Territory Government's Closing the Gap initiatives first introduced in 2008-09 could present a risk to expense and capital spending estimates in future years due to the potential for significant additional investment and flow on effects to service delivery areas. Any additional amounts approved over and above the funding committed over the forward years may affect future budget outcomes.

**Enterprise Bargaining Agreements** – The outcome of future enterprise bargaining agreements over and above amounts currently factored into the forward estimates will increase budgetary pressures.

### Contingent Liabilities

These are potential future costs to Government that may arise from guarantees, indemnities, legal and contractual claims as they constitute a risk to the Territory's financial position.

For more information on Statement of Risks, refer to Chapter 3 in the 2009-10 Budget Paper No. 2: Fiscal and Economic Outlook.

## Chapter 3 Economic Outlook and Fiscal Strategy

This chapter meets the *Fiscal Integrity and Transparency Act* requirement for the Mid-Year Report to provide updated information on both the economic assumptions and Fiscal Strategy as set out in the 2009-10 Budget Papers.

### Structure of the Economy

The structure of the Northern Territory economy is markedly different to other Australian jurisdictions, reflecting its abundance of natural resources, its comparatively large public sector, and the importance of the large defence presence. Territory gross state product (GSP), at around \$14.6 billion, accounts for approximately 1.3 per cent of national gross domestic product (GDP).

Economic growth in the Northern Territory can be volatile from year to year. The small economy means large, typically resource-based projects can have a substantial impact on investment and income streams, resulting in volatile growth patterns. Another source of volatility in reported annual economic growth comes from Australian Bureau of Statistics (ABS) data revisions, which in the Territory can be significant.

### Recent Economic Performance

Table 3.1: Summary of Economic Parameters

% Change	2005-06	2006-07	2007-08	Budget Estimate	ABS		Revised Forecast
					Latest Estimate	Budget Forecast

<sup>2</sup> Year-on-year ended December percentage change.

n/a. not available

Source: Northern Territory Treasury, Australian Bureau of Statistics

Territory GSP growth forecasts for 2008-09 have been revised upwards from 4.1 per cent at the time of the Budget to 4.9 per cent in the Mid-Year Report. The upward revision is primarily driven by stronger than forecast increases in engineering construction activity.

State final demand (SFD), a measure of consumption and investment expenditure, is reported by the Australian Bureau of Statistics to have increased by 6.2 per cent in 2008-09, stronger than the 5.6 per cent growth estimated by Treasury at the time of the Budget. The main contributor to growth was private sector engineering construction activity, which increased by 70.5 per cent to \$1.75 billion, contributing 4.6 percentage points to growth in 2008-09. This reflects construction work undertaken for a number of resource-related major projects such as the:

- Bonaparte gas pipeline;
- ENI Blacktip project;
- Montara, Skua, Swift and Swallow oil field developments; and
- GEMCO refinery expansion.

Public consumption increased by 5.2 per cent in 2008-09, contributing 1.5 percentage points to growth. Growth was driven by increased expenditure by Defence and the Territory Government. The increase in Defence expenditure primarily relates to the build up of personnel numbers associated with the 5/7 Royal Australian Regiment (RAR) Battalion being split into two separate battalions, 5 RAR and 7 RAR. The increase in Territory Government expenditure reflects increased outlays related to the Closing the Gap strategy and additional government services.

Despite Commonwealth stimulus payments to households and declining interest rates, growth in private consumption expenditure in the Territory moderated to 1.9 per cent in 2008-09. This reflected households becoming more cautious in their discretionary spending as a result of increased uncertainty about the effect of the global financial crisis on the national and Territory economies.

In volume terms, net exports (exports less imports) of goods to the Territory declined by 26.1 per cent in 2008-09 driven by a 70.3 per cent increase in imports. The strong growth in goods imports was driven by increasing volumes of feedstock gas for the ConocoPhillips liquefied natural gas (LNG) plant at Wickham Point and machinery and equipment primarily for the mining and energy industries. Territory goods exports in 2008-09 increased by 30 per cent driven by increasing volumes of mining and energy commodities such as LNG, alumina and iron ore.

## Economic Outlook

The GSP, population and the Consumer Price Index (CPI) economic parameters reported in the 2009-10 Budget have been revised for the Mid-Year Report (Table 3.1). Revisions reflect new and or revised data and latest information regarding the status of projects.

Although slowing in 2009-10, the Territory economy is expected to continue outperforming the national economy supported by:

- strong growth in net exports;
- record levels of public investment;
- strong growth in private sector housing construction; and
- Commonwealth stimulus payments.

### Gross State Product

The Budget forecast of 2.0 per cent for GSP growth in the Territory in 2009-10 has been revised upwards to 2.6 per cent, on the back of stronger than forecast growth in international exports.

The upward revision to growth in international exports reflects the expectations of a stronger recovery in the global economy over 2010 than was forecast in the Budget. In April 2009, the International Monetary Fund (IMF) forecast that, after contracting by 1.3 per cent in 2009, the global economy would stage a slow recovery over 2010, with below-trend growth of 1.9 per cent forecast. In October 2009, the IMF revised its 2010 growth forecast to 3.1 per cent driven by a stronger than expected rebound in Asian (particularly China's) economies over 2009. The stronger than forecast recovery in China has been fuelled by expansionary monetary policy and

a 4 trillion yuan stimulus package that will be primarily focused on major infrastructure projects across the country.

The Territory economy is expected to be a major beneficiary of the growth in Asia largely through increased demand for mineral and energy commodities. This is expected to support increasing production at a number of mines throughout the Territory that will drive exports growth. Strong growth in exports will also be fuelled by increasing oil production as a new sidetrack well at the Laminaria-Corallina oil fields in the Timor Sea ramps-up production. The forecast growth in oil production and exports growth has been partly offset by the short-term cessation of production at the Montara and Puffin oil fields.

#### Montara and Puffin oil fields

On 21 August 2009, the West Atlas drilling rig located at the Montara oil and gas field in the Timor Sea began spilling large amounts of oil into the surrounding waters. Numerous attempts were made by the operator PTTEP Australasia to plug the leak and it was during one of these attempts that the oil spill caught fire, leading to substantial damage to the West Atlas rig. Given the degree of damage, it is unlikely the Montara field will produce any oil over the remainder of 2009-10. In the Budget, the commencement of oil from this field and the ramping up of production at the nearby AED Oil Puffin field were expected to be major drivers of increased oil production in the Territory over 2009-10. With AED Oil announcing in May 2009 that it would be indefinitely ceasing production at the Puffin oil field, forecast oil production in the Territory has been revised downwards in the Mid-Year Report.

#### State Final Demand

SFD is forecast to decline by 3.9 per cent in 2009-10, less than the 5 per cent predicted at the time of the Budget. The reduction from 2008-09 reflects lower engineering construction activity and machinery and equipment expenditure as major projects are completed.

Partly offsetting this decline will be a 36 per cent increase in public investment in 2009-10. This reflects:

- a record capital works program by the Territory Government;
- the Commonwealth's Nation Building and Jobs Plan Package;
- a large increase in the Power and Water Corporation's capital works program; and
- Defence spending for infrastructure projects.

Growth in private consumption expenditure is forecast to strengthen from 1.9 per cent in 2008-09 to 2.7 per cent in 2009-10. Although strengthening over 2009-10, growth in household consumption is expected to remain below long-term trend levels. This largely reflects the unwinding effect of Commonwealth stimulus payments to households, rising interest rates and more moderate growth in the Territory economy over the year. Nevertheless, growth is expected to be underpinned by high levels of consumer confidence and ongoing population and employment growth. Strong growth in private housing construction will also be supportive of growth, particularly in the retail sector, reflecting the need to furnish these new dwellings.

### Employment

The ABS reports Territory employment increased by 4.2 per cent in 2008-09, stronger than the 2.5 per cent rise in employment estimated at the time of the 2009-10 Budget. The employment growth forecast for 2009-10 of 2.8 per cent is above the 1.5 per cent forecast in the Budget.

Employment growth is expected to be driven by record levels of public sector investment associated with the Commonwealth's infrastructure-related stimulus spending, Defence infrastructure projects and the Territory Government's record capital works program. Large scale land releases coupled with a strong rebound in housing construction both in the public and private sectors will also be supportive of employment growth over the year.

Sampling variability and higher standard errors than other jurisdictions continue to be a factor affecting ABS labour force data in the Territory.

### Population

Population estimates at 31 December each year are a key determinant of the allocation of the national GST revenue pool. Accurate population estimates are very important to the Territory, which is estimated to receive just over half its revenue from the GST. Population growth in the Territory is particularly difficult to forecast, as a result of volatile net interstate migration estimates, remoteness and the high proportion of Indigenous people resident in remote areas. Population growth is also heavily influenced by major projects, which results in highly volatile growth patterns.

At the time of the 2009-10 Budget, the Territory's resident population was forecast to increase by 1.8 per cent to December 2009. This has been revised upwards to 2.0 per cent based on strong population growth levels experienced over the last year, as the result of stronger than expected overseas and interstate migration figures.

Activity related to increased public housing in urban and remote areas and the Territory's record capital works program are likely to continue to stimulate growth in the short term, while the recent turnaround in the global economy, particularly in the Chinese economy, is likely to sustain strong population growth levels. Population growth is forecast to continue at 2.0 per cent to December 2010, revised up from 1.6 per cent.

### Consumer Price Index

The Darwin inflation outlook reported at the time of the Budget was that declining fuel prices, subdued consumer spending and significant falls in commodity prices as a result of the slowing global and Territory economies would lead to a moderation in growth from 4 per cent in 2008 to 2.6 per cent in 2009. Although fuel prices have declined and consumer spending moderated as forecast, housing purchase and rental prices have increased by more than expected. As a result, the growth forecast for the Darwin CPI in 2009 has been revised upwards to 2.8 per cent.

### Moderating growth in housing prices, tight rental markets in 2010

Despite large increases in 2009, growth in housing prices in the Darwin region are expected to moderate in 2010. This reflects the impact of:

- substantial amounts of new residential land being released over the year;
- strong growth in private sector housing construction, which will significantly add to supply;
- moderating first home buyer activity following the cessation of the First Home Owner Boost in January 2010; and
- expected increases in interest rates by the Reserve Bank of Australia.

Nevertheless, the housing component of the CPI is expected to continue to be a significant driver of inflation, reflecting ongoing pressure on rental prices. The continuing tightness in the rental market reflects forecasts of strong population growth, low rental vacancy rates and lower net rental stocks. The reduction in net rental stocks over 2009 has been affected by the increased number of first home buyers purchasing established properties, especially at the lower end of the market, that have not been replaced with new supplies. New rental housing supplies (especially unit developments in the Darwin CBD) have been constrained by tighter credit markets and increased risk aversion by financial institutions. This is reflected in the decline in the number of building approvals for units in the Darwin region over 2009. Although building approvals for units may recover over 2010, driven by investors attracted by relatively high rental yields, substantial increases in supply are not expected to come onto the market until 2011.

### Appreciating Australian dollar detracting from growth

Strengthening demand for resource commodities coupled with increasing interest rates and the ongoing underperformance of the US economy, is forecast to lead to the continuing appreciation of the Australian dollar over the remainder of 2009 and into 2010. This will help to partly offset the impact on Darwin's inflation rate of forecast increases in \$US denominated crude oil prices, driven by the strengthening global economy, over the year.

### CPI outlook

The slowing Territory economy, increasing interest rates and the forecast appreciation of the Australian dollar are expected to detract from growth in the Darwin CPI over 2010. Nevertheless, growth is expected to remain above long-term trend levels driven by increasing housing-related prices, especially for rental accommodation. As a result, the Budget forecast of 2.5 per cent growth in the Darwin CPI has been revised upwards to 2.9 per cent in the Mid-Year Report.

## Fiscal Strategy

The *Fiscal Integrity and Transparency Act* requires the Mid-Year Report to provide updated information to allow an assessment of the Government's fiscal performance against fiscal strategy targets, as set out in the 2009-10 Budget.

The fiscal strategy was revised in the 2009-10 Budget as a result of the global financial crisis. The 2009-10 Mid-Year Report has also been framed against this backdrop. The revised strategy contains short-term and medium-term measures and is encapsulated by the Territory Government's commitment to increase investment in both infrastructure and service delivery programs to support jobs and maintain growth in the Territory.

The Government's short and medium term fiscal objectives as set out in the 2009-10 Budget papers and the assessment of this strategy against the updated fiscal projections follows.

### Sustainable Service Provision

Target: Expenditure growth not to exceed revenue growth, excluding tied Commonwealth funding.

*Assessment: Return budget to surplus once economy improves*

The cash outcome still projected to trend towards a surplus position.

### Infrastructure for Economic and Community Development

Target: Maintain infrastructure investment at appropriate levels.

*Assessment: Infrastructure spending of at least twice depreciation expenses on average over the current economic cycle and at least equal thereafter.*

Updated fiscal projections continue to project infrastructure spending in excess of target measure.

### Competitive Tax Environment

Target: Ensure Territory taxes and charges are competitive with the average of the states and territories.

*Assessment: Taxation below the state average.*

The Territory's taxation revenue per capita remains significantly below the state average.

### Prudent Management of Liabilities

Target: Reduce debt to pre-GFC levels once the economy rebounds.

*Assessment: Once economy improves, debt levels to reduce on average by 5 per cent per annum of additional debt incurred since 2007-08.*

The measures of net debt and net financial liabilities have improved since May 2009.

The purpose of the Mid-Year Report is to provide updated estimates for the Budget and three forward years. Many of the fiscal strategy targets provide both absolute measures for the Territory as well as comparative state measures. Although information for the states is generally available for the

## Sustainable Service Provision

2008-09 outcome, updated state estimates for 2009-10 are not yet available. Thus the comparisons that follow provide updated information for the Territory and, only where possible, updated comparative state data.

**Target: Expenditure growth not to exceed revenue growth, excluding tied Commonwealth funding**

This element of the fiscal strategy aims to limit growth in general government operating expenses to less than the growth in revenue, excluding tied Commonwealth revenue, over the economic cycle, thereby achieving a sufficient operating balance to fund general government capital spending.

During the economic downturn of falling revenue growth and increased infrastructure spending, this aim will limit cash deficits to a minimum to support growth in the local economy. Once the economy and government revenues return to more normal levels, the aim is to have sufficient cash surpluses to fund capital spending and provide capacity to retire debt to pre-GFC levels.

As stated in the 2008-09 TAFR, the cash surplus in 2008-09 that primarily resulted from additional tied funding received from the Commonwealth late in the financial year has resulted in a worsening effect on the 2009-10 revised estimate compared to the May 2009 Budget. This is offset by the increase in GST revenue, mining royalties and stamp duty on conveyances, and results in a revised deficit of \$249 million, which when the effect of the carryover of expenditure from 2008-09 is excluded, is an underlying improvement of around \$100 million.

All forward year cash targets remain unchanged with the net operating balance remaining in a surplus position in all years, providing some capacity to invest in infrastructure.

Table 3.2 compares the net operating balance, including as a proportion of revenue, and the cash outcome for 2009-10 and forward estimates against those predicted in May 2009.

Table 3.2: General Government Sector – Net Operating Balance and Cash Outcome

## Infrastructure for Economic and Community Development

### Target: Maintain infrastructure investment at appropriate levels

Infrastructure investment plays a central role in the Government's budget strategy and is essential for the delivery of the Territory's social and economic requirements.

Short-term counter-cyclical increases in infrastructure spending during the period of economic downturn are required to support economic recovery and sustain jobs in the Territory. Accordingly, the Territory Government has committed to spending at least twice its level of depreciation expenses on capital infrastructure on average over the current economic cycle.

Once the economy and government revenues return to more usual levels, the strategy is to maintain infrastructure spending to at least equal to depreciation charges to support medium-term economic growth while trending towards the objective of a general government fiscal balance.

As shown in Table 3.3 and 3.4, all years through 2011-12 show a further increase in investment in infrastructure since Budget-time and all years continue to exceed the revised fiscal strategy target of spending twice depreciation levels over the current economic cycle.

The Government's infrastructure investment comprises purchases of non financial assets (including construction and capital items) and capital grants to non government organisations.

Table 3.3: General Government

<sup>1</sup> Mid-Year Report reflects actual outcome.  
Source: Northern Territory Treasury

The increase in capital investment since May 2009 is mainly the result of increased Commonwealth-funded infrastructure investment under the Building the Education Revolution stimulus package, funding for remote police stations and Indigenous housing.

Table 3.4: General Government Sector – Capital Investment to Depreciation Ratio

The fiscal balance is an accrual measure that includes the effect of both capital and operating transactions and demonstrates the Territory's investment balance. A fiscal balance deficit is consistent with a developing jurisdiction such as the Territory.

Table 3.5 presents the general government sector's fiscal balance over the forward years and as a proportion of total revenue against those predicted in May 2009.

Table 3.5: General Government Sector – Fiscal Balance

	2008-09 <sup>1</sup>	2009-10	2010-11	2011-12	2012-13

As a Proportion of Total Revenue (%)	2.28	- 0.83	0.10	- 0.07	- 0.19

<sup>1</sup> Mid-Year Report reflects actual outcome.  
Source: Northern Territory Treasury

Although the Territory's fiscal balance remains in deficit over the budget cycle, it continues to improve to a projected fiscal balance deficit of \$53 million in 2012-13, albeit at a slower rate than projected in May 2009.

## Competitive Tax Environment

**Target: Ensure Territory taxes and charges are competitive with the average of the states and territories**

The Government is committed to maintaining taxation at levels that are competitive with other states and territories and to encourage increased levels of business activity in the Territory. Accordingly this element of the strategy is constant irrespective of prevailing economic conditions.

Comparisons of relative tax competitiveness are complex due to inherent differences in respective economies and in taxation regimes. Therefore in order to measure and assess the competitiveness of the Territory's tax system, the following are utilised:

- taxation revenue per capita; and
- taxation effort as assessed by the Commonwealth Grants Commission.

Taxation revenue per capita is a simple summary measure that affords some comparability with other jurisdictions.

Table 3.6 shows that the Territory's tax collection for 2009-10 is estimated to increase by \$56 to \$1871 per capita from original 2009-10 Budget estimates but remains well below the average of the other jurisdictions of \$2399 per capita. This movement since May 2009 is due to the increase in economic activity offset by the decrease in bookmakers tax.

Table 3.6: General Government Sector – Comparison Taxation Revenue Per Capita

	2008-09 Estimate	2008-09 Outcome <sup>1</sup>	2009-10 Budget	2009-10 Revised <sup>2</sup>
	\$ per capita	\$ per capita	\$ per capita	\$ per capita
State Average	2 332	2 335	2 399	2 399
Northern Territory	1 850	1 815	1 815	1 871

<sup>1</sup> Actual 2008-09 data not available for ACT and South Australia (Budget estimate used).

<sup>2</sup> 2009-10 revised reflects original Budget for state average.

Source: State and territory outcome reports, state and territory budget papers, ABS Cat. No. 3101.0

Although taxation per capita is a useful comparative measure, it is limited in that it does not make any allowances for differences in states' capacity to raise revenue.

A more useful measure of tax competitiveness is the Commission's analysis of 'tax effort', which adjusts for the extent to which a particular state's capacity to raise revenue is above or below average. Table 3.7 details the Territory's revenue-raising capacity and effort expressed as a percentage of the Australian average in 2007-08, the latest year assessed by the Commission.

Table 3.7: Northern Territory Revenue – Raising Capacity and Effort 2007-08

	Capacity <sup>1</sup>	Effort <sup>2</sup>
	%	%
Total Taxation	77	102
Total Own-Source Revenue	89	99

<sup>1</sup> Northern Territory's capacity to raise revenue compared with the Australian average.

<sup>2</sup> Northern Territory's revenue effort compared with the Australian average, given the capacity available.

Source: Commonwealth Grants Commission 2009 Update

The Commission's assessment shows that the Territory's tax effort (102 per cent) is slightly above the Australian average reflecting the continued growth in the housing market in that year. In regard to own-source revenue, the Territory's effort is at 99 per cent, slightly below the Australian average.

The Commission's assessment combined with the per capita measure of taxation revenue demonstrates that the Government continues to provide a competitive tax environment for Territorians.

## Prudent Management of Liabilities

**Target: Reduce debt to pre-GFC levels once the economy rebounds**

This element of the revised fiscal strategy provides that during the current economic cycle, short-term increases in general government debt levels are expected as a result of increased investment in infrastructure to support Territory jobs and the economy. It also aims to ensure that debt is prudently managed, taking into consideration service delivery needs and capital investment in infrastructure to promote social wellbeing and economic growth.

This is particularly important for the Territory due to its greater infrastructure requirements relative to other jurisdictions, resulting in the Territory traditionally having higher levels of debt than the states.

Once the economy recovers the sustainable service provision target of limiting expenditure growth will provide the capacity to reduce any additional debt incurred on average by 5 per cent per annum.

The measures of net debt and net financial liabilities for the general government sector provide the means of assessing the Territory's performance against this element of the fiscal strategy.

Table 3.8: General Government Sector – Net Debt and Net Financial Liabilities

<sup>1</sup> Mid-Year Report reflects actual outcome.

Source: Northern Territory Treasury

Over the forward estimates period, the ratio of net debt to revenue has decreased from that estimated in May 2009 predominately due to the 2008-09 cash surplus and the market value of the Territory's investments. This has then flowed through to the forward estimates with the ratio to revenue now projected to be 28 per cent in 2012-13.

Net financial liabilities is a broader measure than net debt in that it encompasses all liabilities including unfunded employee entitlements, consisting largely of unfunded superannuation, which is a major liability for the Territory and most states.

Table 3.8 highlights that the level of net financial liabilities is estimated to continue to fall over the forward estimates from that projected at Budget-time to \$4580 million by 2012-13.

When compared to the 2008-09 outcome of 90 per cent, net financial liabilities as a ratio to revenue is expected to increase in all forward years. This increase is predominantly due to the long-term bond rate used to value the Territory's superannuation liability. A discount rate of 5.6 per cent, as required by accounting standards, was applied in the 2008-09 actual outcome resulting in a lower liability. However since 30 June 2009, the 10-year bond rate has reduced to around 5 per cent at the time of writing this Report. Accordingly 5 per cent has been used in valuing the Territory's superannuation liability for 2009-10 and all forward estimate years. This compares to 4 per cent that was estimated in the May 2009 Budget and largely accounts for the improvement in the revised estimate on that projected at Budget-time for all years.

## Conclusion

Overall the Territory continues to maintain its trend towards its objectives and targets as set out in the fiscal strategy, which was revised in the 2009-10 Budget due to the GFC, the effects of which on the Territory's economic and financial conditions continue to be experienced.

The operating balance continues to remain in surplus over the budget cycle, largely as a greater proportion of revenue is applied to capital investment with deficit cash and fiscal balances still predicted in all years.

This reflects the slower than historic growth in the Territory's revenue base despite the slight increase in GST revenue, and the ongoing Territory Government's commitment to stimulating the economy during the current economic and financial conditions.

In addition, the Territory Government is continuing its commitment to maintain taxation at competitive levels, relative to the rest of Australia, in order to encourage increased levels of business activity.

The measures of net debt and net financial liabilities to revenue have improved since that projected in May 2009. This is despite the continued backdrop of economic uncertainty and the record levels of investment in the Territory's infrastructure base that mean short-term budget deficits and increased debt are inevitable. However, as reflected in the medium-term objectives of the strategy, the Government remains committed to return the budget to surplus and retire debt as soon as it is economically prudent to do so.

The most significant risk to the Territory's Budget remains the effect of GST revenue changes from the 2010 Major Review of State Revenue Sharing Relativities currently being undertaken by the Commonwealth Grants Commission.

## Chapter 4 Uniform Presentation Framework

Under the Uniform Presentation Framework (UPF), jurisdictions have agreed to publish information in a standard format in their budget papers, outcome and mid-year reports to facilitate a basis for meaningful comparisons of each government's financial results and projections.

Consistent with 2008-09, the 2009-10 Mid-Year Report financial statements are presented in accordance with accounting standard AASB 1049 – Whole of Government and General Government Sector Financial Reporting.

The reporting requirements of the *Fiscal Integrity and Transparency Act* complement those specified in the UPF Agreement. The Act requires that fiscal outlook reports be prepared in accordance with external reporting standards, including the Australian Accounting Standards and the UPF.

The tables in this chapter meet the Territory's reporting obligations under both the *Fiscal Integrity and Transparency Act* and the UPF. They include an operating statement, balance sheet and cash flow statement for the general government, public non financial corporation and non financial public sectors.

During the preparation of the 2009-10 Budget, Territory Housing merged with the Department of Local Government and Housing, with the exception of home lending activities, which were included in the government business division, NT Home Ownership. At the time of the 2009-10 Budget, NT Home Ownership was reported in the Public Non Financial Corporation Sector. However, the most recent advice received from the Australian Bureau of Statistics is that NT Home Ownership should be included within the General Government Sector. Accordingly all original budget data presented in this Report has been restated for this treatment change. The effect on budget estimates outcomes is not material.

Also included are tables presenting general government sector taxes and the revised 2009-10 Loan Council Allocation.

## Appendix: Classification of Entities in the Northern Territory Public Sector

### Non Financial Public Sector

#### General Government

Aboriginal Areas Protection Authority  
 Auditor-General's Office  
 AustralAsia Railway Corporation<sup>3</sup>  
 Batchelor Institute of Indigenous Tertiary Education<sup>3</sup>  
 Central Holding Authority  
 Construction Division<sup>1</sup>  
 Darwin Waterfront Corporation<sup>3</sup>  
 Data Centre Services<sup>1</sup>  
 Department of Business and Employment  
 Department of the Chief Minister  
 Department of Education and Training  
 Department of Health and Families  
 Department of Justice  
 Department of the Legislative Assembly  
 Department of Local Government and Housing  
 Department of Natural Resources, Environment, the Arts and Sport  
 Department of Planning and Infrastructure  
 Department of Regional Development, Primary Industry, Fisheries and Resources  
 Desert Knowledge Australia<sup>3</sup>  
 Government Printing Office<sup>1</sup>  
 Land Development Corporation  
 Natural Resource Management Board<sup>3</sup>  
 Nominal Insurer Fund<sup>3</sup>  
 Northern Territory Electoral Commission  
 Northern Territory Legal Aid Commission<sup>3</sup>  
 Northern Territory Major Events Company Pty Ltd<sup>3</sup>  
 Northern Territory Police, Fire and Emergency Services  
 Northern Territory Treasury  
 NT Build Statutory Corporation<sup>3</sup>  
 NT Fleet<sup>1</sup>  
 NT Home Ownership<sup>1</sup>  
 Office of the Commissioner for Public Employment  
 Ombudsman's Office  
 Territory Discoveries<sup>1</sup>  
 Territory Wildlife Parks<sup>1</sup>  
 Tourism NT

#### Public Non Financial Corporations

Darnor Pty Ltd<sup>3</sup>  
 Darwin Bus Service<sup>1</sup>  
 Darwin Port Corporation<sup>1</sup>  
 Gasgo Pty Ltd<sup>3</sup>  
 Indigenous Essential Services Pty Ltd<sup>3</sup>  
 Power and Water Corporation<sup>2,3</sup>

<sup>1</sup> Government business division.

<sup>2</sup> Government owned corporation.

<sup>3</sup> Non budget sector entity.

## Glossary

<b>Advances/Advances Paid</b>	Loans acquired for policy rather than liquidity management purposes. Included are long-term and short-term loans, non marketable debentures and long and short term promissory agreements (bonds and bills) issued to public sector units for achieving government policy objectives.
<b>Capital Grants</b>	Transactions in which the ownership of an asset (other than cash and inventories) is transferred from one institutional unit to another, in which cash is transferred to enable the recipient to acquire another asset or in which the funds realised by the disposal of another asset are transferred, for which no economic benefits of equal value are receivable or payable in return.
<b>Cash Surplus/Deficit</b>	Reported in the cash flow statement that measures the net impact of cash flows during the period. It equals net cash flows from operating activities plus net cash flows from the acquisition and disposal of non financial assets, less distributions paid, less assets acquired under finance leases and similar arrangements.
<b>Change in Net Worth</b>	Change in net worth (comprehensive result) is revenue from transactions less expenses from transactions plus other economic flows, and measures the variation in a government's accumulated assets and liabilities.
<b>Comprehensive Result</b>	The net result of all items of income and expense recognised for the period. It is the aggregate of the operating result and other movements in equity, other than transactions with owners as owners.
<b>Consumer Price Index</b>	A general indicator of the prices paid by household consumers for a specific basket of goods and services in one period, relative to the cost of the same basket in a base period.
<b>Contingent Liability</b>	A potential financial obligation arising out of a condition, situation, guarantee or indemnity, the ultimate effect of which will be confirmed only on the occurrence or non-occurrence of one or more uncertain future events.
<b>Current Grants</b>	Amounts payable or receivable for current purposes for which no economic benefits of equal value are receivable or payable in return.
<b>Estimated Resident Population</b>	The official measure of the usual resident population of Australia and the states and territories. It is generated by the Australian Bureau of Statistics every quarter by adding natural increase (the excess of births over deaths), net overseas migration and (for the jurisdictions) net interstate migration occurring during the period to the population at the beginning of each period.
<b>Finance Lease</b>	Lease agreements that transfer substantially all the risks and benefits relating to ownership of an asset from the lessor (legal owner) to the lessee (party using the asset).

**Financial Asset**

Any asset that is:

- cash;
- an equity instrument of another entity;
- a contractual right:
  - to receive cash or another financial asset from another entity; or
  - to exchange financial assets or financial liabilities with another entity under conditions that are potentially favourable to the entity; or
- a contract that will or may be settled in the entity's own equity instruments and is:
  - a non derivative for which the entity is or may be obliged to receive a variable number of the entity's own equity instruments; or
  - a derivative that will or may be settled other than by the exchange of a fixed amount of cash or another financial asset for a fixed number of the entity's own equity instruments.

For this purpose, the entity's own equity instruments do not include instruments that are themselves contracts for the future receipt or delivery of the entity's own equity instruments.

**General Government Sector**

Defined in Government Finance Statistics as an entity or group of entities which are mainly engaged in the production of goods and/or services outside the normal market mechanism. Goods and services are provided free of charge or at nominal charges well below costs of production.

**General Government Agency**

An entity or group of entities mainly engaged in providing services or producing goods for the general public, such as education, health and policing services. Goods and services are provided free of charge or at nominal charges.

**Goods and Services Tax (GST) Revenue**

On 1 July 2000, the Commonwealth introduced the goods and services tax (GST). Payments from the Commonwealth return the GST revenue to the states and territories, replacing the previous general purpose grants.

**Government Business Division**

A Territory-controlled trading entity that follows commercial practices and is required to comply with competitive neutrality principles.

**Government Finance Statistics**

Refers to statistics that measure the financial transactions of governments and reflect the impact of those transactions on other sectors of the economy. Government Finance Statistics in Australia are developed by the Australian Bureau of Statistics in conjunction with all governments and are mainly based on international statistical standards, developed in consultation with member countries by the International Monetary Fund.

**Government Owned Corporation**

An entity whose objectives are to operate at least as efficiently as any corporate business and maximise the sustainable return to government. The *Government Owned Corporations Act* adopts the shareholder model of corporate governance. The Power and Water Corporation became the Territory's first government owned corporation on 1 July 2002.

<b>Gross Domestic Product</b>	The total value of goods and services produced in Australia over the period for final consumption. Intermediate goods, or those used in the production of other goods, are excluded. Gross domestic product can be calculated by summing total output, total income or total expenditure.
<b>Gross State Product</b>	Similar to gross domestic product, except that it measures the total value of goods and services produced in a jurisdiction. It is the sum of all income, namely wages salaries and profits, plus indirect taxes less subsidies. It can also be calculated by measuring expenditure, where it is the sum of state final demand and international and interstate trade, changes in the level of stocks and a balancing item.
<b>Guarantee</b>	An undertaking to answer for the debt or obligations of another person or entity.
<b>Indemnity</b>	A written undertaking to compensate, protect or insure another person or entity against future financial loss, damage or liability.
<b>Intergovernmental Agreement</b>	An agreement signed by all states and territories and the Commonwealth in December 2008 defining the framework for federal financial relations, encompassing Commonwealth funding to states through general revenue assistance, specific purpose payments and national partnership payments.
<b>Loan Council</b>	The Australian Loan Council endorses Commonwealth and state government borrowing levels. Current arrangements seek to emphasise transparency of public sector finances, through financial market scrutiny of proposed borrowing to restrict borrowing to prudent levels.
<b>Loan Council Allocation</b>	The nomination to the Loan Council of the level of financing required.
<b>Memorandum Items – Loan Council</b>	Memorandum items are used to adjust the cash surplus/ deficit to include in the Loan Council Allocation certain transactions that may have the characteristics of public sector borrowings but do not constitute formal borrowings.
<b>National Partnership Agreement (NP)</b>	An agreement between a state/territory and the Commonwealth defining the objectives, outputs and performance benchmarks related to the delivery of specified projects, to facilitate reforms or to reward those jurisdictions that deliver on national reforms or achieve service delivery improvements.
<b>Net Acquisition/(Disposal) of Non-Financial Assets from Transactions</b>	Purchases (or acquisitions) of non financial assets less sales (or disposals) of non financial assets less depreciation plus changes in inventories and other movements in non financial assets.
<b>Net Cash Flows from Investments in Financial Assets (Liquidity Management purposes)</b>	Cash receipts from liquidation or repayment of investments in financial assets for liquidity management purposes less cash payments for such investments. Investment for liquidity management purposes means making funds available to others with no policy intent and with the aim of earning a commercial rate of return.

<b>Net Cash Flows from Investments in Financial Assets (Policy Purposes)</b>	Cash receipts from the repayment and liquidation of investments in financial assets for policy purposes less cash payments for acquiring financial assets for policy purposes. Acquisition of financial assets for policy purposes is distinguished from investments in financial assets (liquidity management purposes) by the underlying government motivation for acquiring the assets. Acquisition of financial assets for policy purposes is motivated by government policies such as encouraging the development of certain industries or assisting citizens affected by natural disaster.
<b>Net Debt</b>	<p>Net debt measures a government's net stock of selected gross financial liabilities less financial assets.</p> <p>Net debt equals the sum of deposits held, advances received, government securities, loans and other borrowings less the sum of cash and deposits, advances paid and investments, loans and placements.</p>
<b>Net Financial Liabilities</b>	Total liabilities less financial assets, other than equity in PNFCs. This measure is broader than net debt as it includes significant liabilities, other than borrowings (for example, accrued employee liabilities such as superannuation and long service leave entitlements). For the PNFC sector, it is equal to negative net financial worth.
<b>Net Financial Worth</b>	Net financial worth measures a government's net holdings of financial assets. It is calculated from the Uniform Presentation Framework balance sheet as financial assets minus liabilities. Net financial worth is a broader measure than net debt, in that it incorporates provisions (such as superannuation, but excludes depreciation and doubtful debts) as well as holdings of equity. Net financial worth includes all classes of financial assets and liabilities.
<b>Net Lending/Borrowing (also referred to as Fiscal Balance)</b>	An operating statement measure that differs from the net operating balance in that it includes spending on capital items, but excludes depreciation. The net lending/borrowing measure more accurately reflects the cash requirements of a government in any given year. A net lending (or fiscal surplus) balance indicates that a government is saving more than enough to finance all its investment spending. A net borrowing (or fiscal deficit) position indicates that a government's level of investment is greater than its level of savings.
<b>Net Operating Balance</b>	Calculated from the operating statement as revenue less expenses from transactions. This excludes capital expenditure and provides a good measure of a government's position over time and an indication of the sustainability of the existing level of government service provision.
<b>Net Worth</b>	Provides a relatively comprehensive picture of a government's overall financial position. It is calculated as total assets less total liabilities less shares and other contributed capital. It includes a government's non financial assets, such as land and other fixed assets, which may be sold and used to repay debt, as well as its financial assets and liabilities including debtors, creditors and superannuation liabilities. Net worth also shows asset acquisitions over time, giving an indication of the extent to which borrowings are used to finance asset purchases, rather than only current expenditure.
<b>Non Financial Assets</b>	Assets that are not financial assets, predominantly land and other fixed assets.

<b>Non Financial Public Sector</b>	The sector formed through a consolidation of the general government and public non financial corporation subsectors.
<b>Operating Result</b>	A measure of financial performance of the operations for the period. It is the net result of items of revenue, gains and expenses (including losses) recognised for the period, excluding those that are classified as 'other non-owner movements in equity'.
<b>Other Economic Flows</b>	Changes in the volume or value of an asset or liability that do not result from transactions (i.e. revaluations such as actuarial gains and losses on defined benefit superannuation plans and other changes in the volume of assets).
<b>Public Non Financial Corporations (PNFC)</b>	A public enterprise primarily engaged in the production of goods or services of a non financial nature, for sale in the market place, at prices which aim to recover most of the costs involved.
<b>Sale of Goods and Services</b>	Revenue from the direct provision of goods and services and includes fees and charges for services rendered, sales of goods and services, fees from regulatory services and work done as an agent for private enterprises. It also includes rental income under operating leases and on produced assets such as buildings, but excludes rent income from the use of non-produced assets such as land. User charges includes sale of goods and services revenue.
<b>Specific Purpose Payments (SPPs)</b>	A Commonwealth financial contribution to support state delivery of service in a particular sector. Payments are made from the Commonwealth Treasury to Northern Territory Treasury, and are appropriated to the relevant Territory Government agency.
<b>State Final Demand</b>	Final consumption expenditure plus gross fixed capital formation in each jurisdiction. It represents the total expenditure on consumption and investment in a jurisdiction.
<b>Other Superannuation Expense</b>	Includes all superannuation expenses from transactions except superannuation interest cost. It generally includes current service cost, which is the increase in entitlements associated with the employment services provided by employees in the current period. Superannuation actuarial gains/losses are excluded as they are considered other economic flows.
<b>Tax Equivalents Regime</b>	The mechanism to ensure that government business divisions and the government owned corporations incur similar tax liabilities to privately owned organisations. Thus, greater parity exists between the cost structures of government controlled trading entities and the private sector, aiding in the achievement of competitive neutrality.
<b>Uniform Presentation Framework</b>	A uniform reporting framework (UPF) agreed by the Australian Loan Council in 2000, which is a revision of the agreement reached at the 1991 Premiers' Conference. The UPF was further updated and reissued in April 2008 to incorporate accounting standard AASB 1049 Whole of Government and General Government Sector Financial Reporting. The UPF specifies that the Commonwealth, state and territory governments will present a minimum set of budget and financial outcome information on the Government Finance Statistics basis according to an agreed format and specified Loan Council reporting arrangements.
